DETAILED ACTION

This Office action is in response to the amendment and Terminal Disclaimer received March 19, 2003.

1. The rejection under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 2-17 of U.S. Patent No. 6,346,359 is **withdrawn** in view of the submitted Terminal Disclaimer.
2. The rejection under 35 U.S.C. 112, second paragraph is **withdrawn** in view of the amendment to the claims, which now state that the coupling reaction rate constant is faster than an azo-dye forming reaction diazo compound and a coupler having a hydrogen atom at a coupling position.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 13,15,16,21-32 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Helvetia Chimica Acta 55.2139 (1972).

The claims are drawn to a recording material comprising a support and at least one recording layer disposed thereon containing a diazo compound and a coupler which reacts with the diazo compound for developing color, wherein the coupler has a leaving group at a coupling position thereof. The claim 21 is further drawn to a method for forming an azo colorant, wherein a coupler having a structure represented by one of the following general formulae (1), (2), (3),

Art Unit: 1752

(4) and (5) and a diazo compound are used wherein L represents a substituent that is releasable at a time of coupling with the diazo compound. Finally claim 29 is drawn to a recording material comprising a support with at least one recording layer disposed thereon containing a diazo compound and a coupler wherein the coupler has a structure represented by one of the following general formulae (1), (2), (3), (4) and (5),

Helvetia Chimica Acta 55.2139 (1972) as stated by applicant on page 4 of the application discloses a coupling reaction between a naphthols based coupler having a leaving group (halogen) at a coupling position. This disclosure anticipates the claimed invention for a method and the recording material wherein the coupler has a leaving group L that is releasable at the time of coupling.
